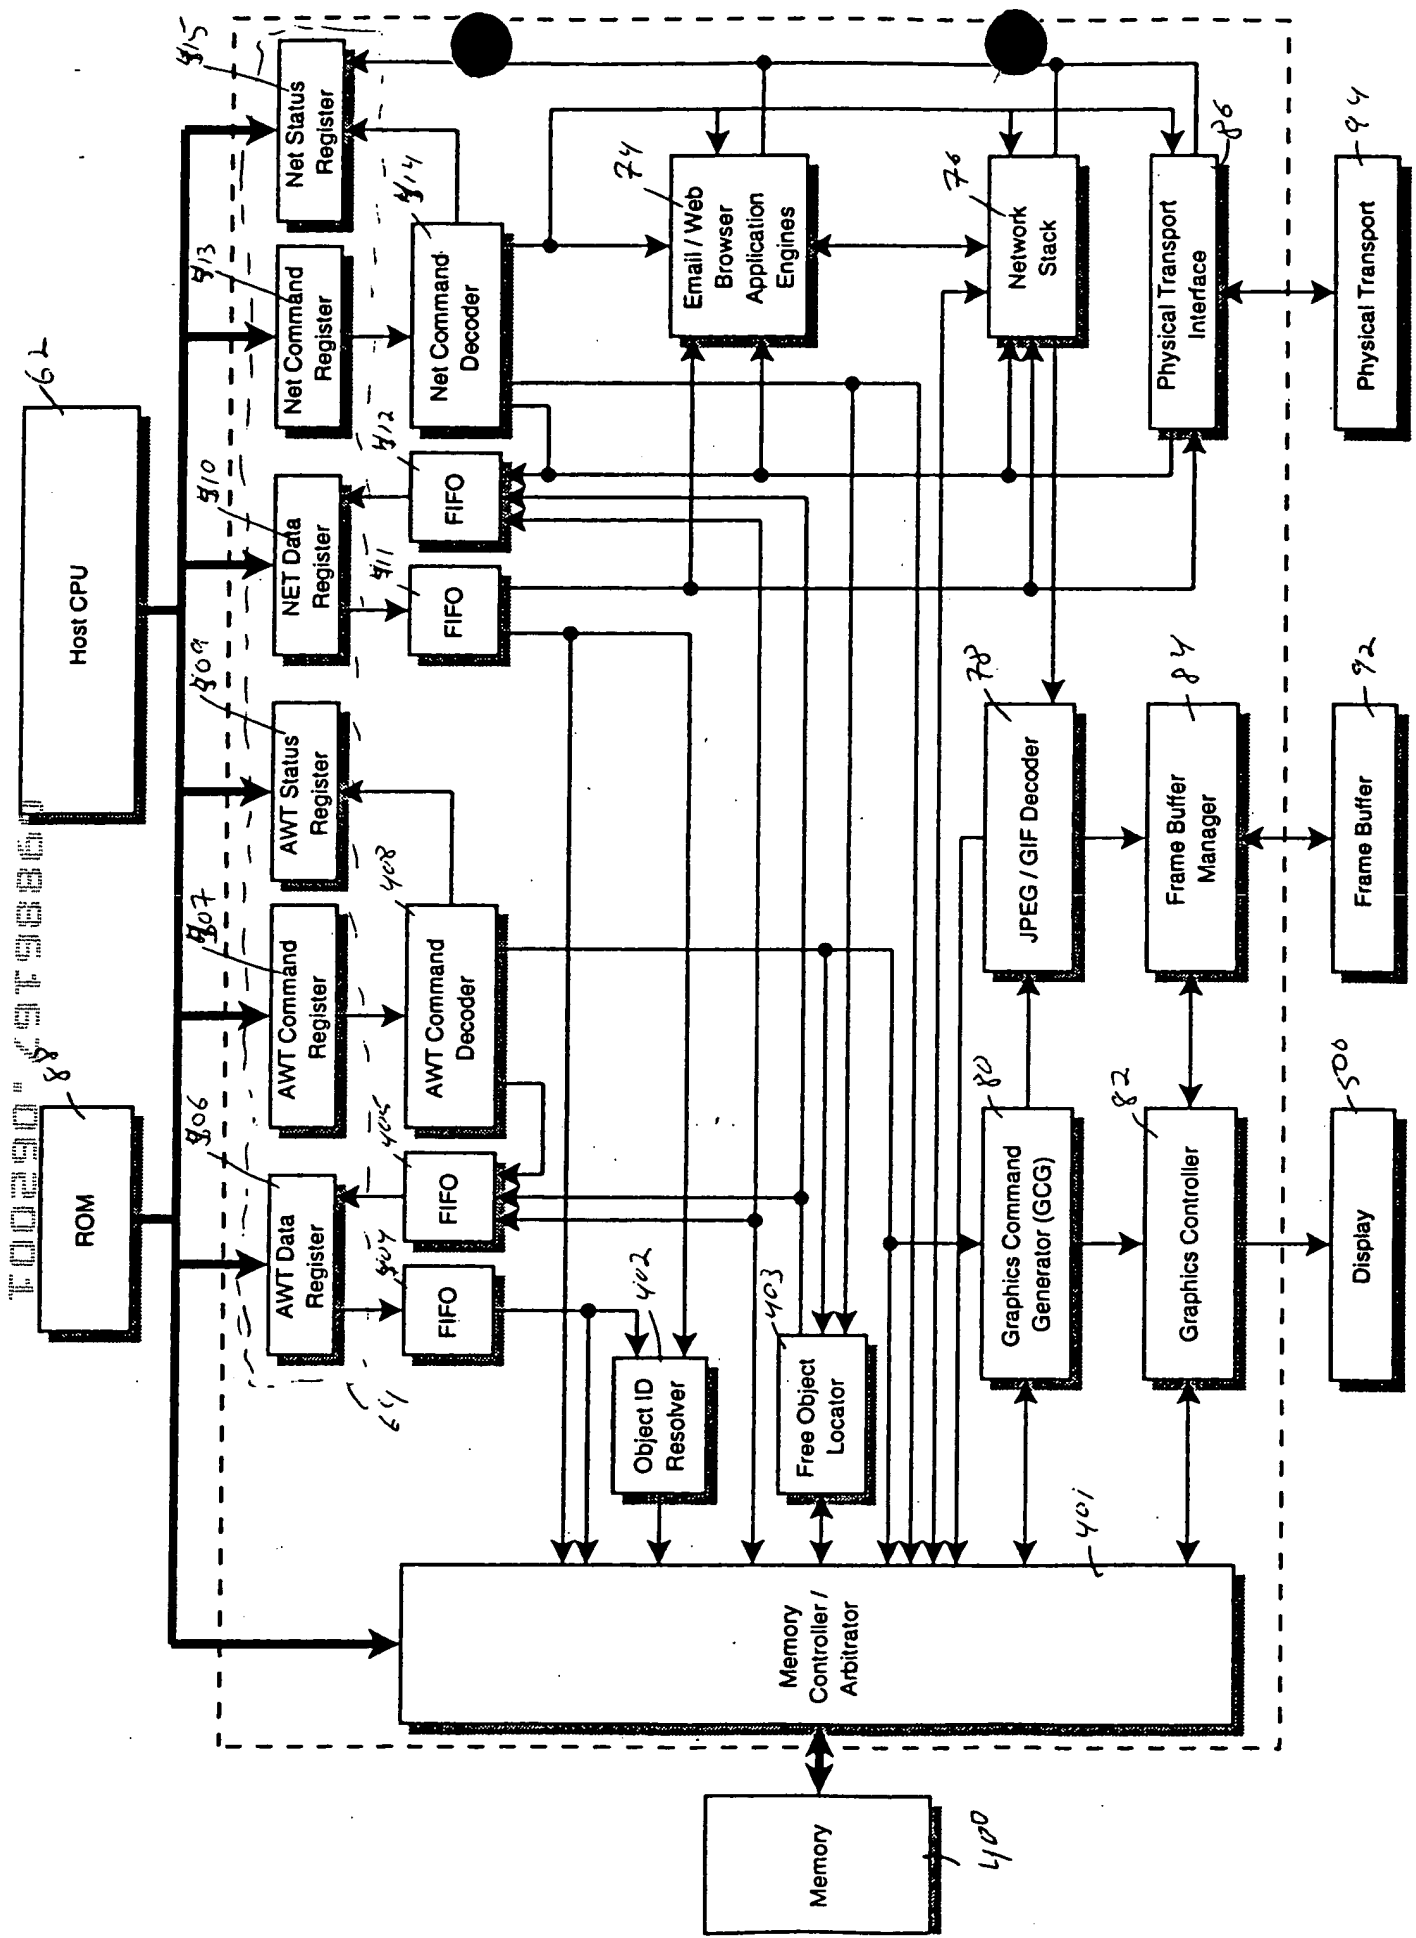

FIG. 2

Object List After Object Instantiations and Deletions

Object #	Memory Block	In Use Flag	Object Type	Obj Link
1	30 byte block	In Use	Frame	4
2	30 byte block	In Use	GridLayout	6
3	30 byte block	In Use	Container	
4	30 byte block	In Use	Component	
5	30 byte block	Free	n/a	
6	30 byte block	In Use	Component	0
n	30 byte block	Free

FIG. 16

Windowing/View System

General Graphics Controller

- Creates Frames (i.e. windows)
- Creates Components (i.e. views)
- Passes image data to Image Renderer
- Passes text to Font Renderer
- Passes shapes to Polygon Renderer
- Allows selection (focus) for frames and components
- Deletes frames and components physically from display
- Traverses object hierarchy when a paint method in a view is called
- Handles mouse and keyboard events "passing" them down through a chain of frames and components

Window Manager

- Draws windows using polygon draws in the Polygon Renderer
- Manages windows so they can overlap
- Determines frame that event occurred in and notifies appropriate layout manager instance that it may need to update
- Oversees container hierarchies within each frame

Layout Manager (belongs to / is referenced by a Frame)

- Manages container hierarchies within a frame's scope
- Determines container that event occurred in and tells it to update if necessary

Component Manager (belongs to / is referenced by a LayoutManager/Container)

- Manages component hierarchies within a container's scope
- Determines component that event occurred in and tells it to update if necessary

Network Controller

Signals DNS queries
 Signals socket creation (allows multiple simultaneous sockets)
 Conducts Network Input and Output
 Signals closing of sockets
 Operates as an abstraction layer over TCP and UDP protocols
 May operate either synchronously or asynchronously

Network Query Mechanism

Performs DNS lookups and reports result to the Network Controller

Socket Manager

Manages sockets in use by applications (Opens and Closes them)
 Determines container that event occurred in and tells it to update if necessary
 Transfers socket status when requested up to the Network Controller

Stream Manager

Shuttles character/stream based input and output over the TCP/IP or UDP link
 Offers a choice of input/output streams that differ for the application's use
 Transfers buffers when requested up to the Network Controller
